

What is claimed is:

- 09767716-012401
T042F0-9T29260
1. A receiving apparatus, comprising:
a receiving device receiving content information
5 of data broadcasting in digital broadcasting;
an instruction device generating instruction
information to be used to automatically select a
plurality of selection items included in the content
information from the content information; and
10 an output device outputting the content
information while automatically selecting the
plurality of selection items according to the
instruction information.
- 15 2. The receiving apparatus according to claim 1,
further comprising
an analysis device extracting the plurality of
selection items by analyzing the content information
and generating an operational procedure for selecting
20 the plurality of selection items in a prescribed order,
wherein said instruction device generates the
instruction information based on the operational
procedure.
- 25 3. The receiving apparatus according to claim 2,

wherein if the content information consists of a plurality of pages, said analysis device analyzes a link between the plurality of selection items and generates an operational procedure that covers the plurality of pages, and said instruction device generates instruction information for sequentially outputting the plurality of pages.

4. The receiving apparatus according to claim 1, further comprising

an extracting device extracting the operational procedure for selecting the plurality of selection items in a prescribed order from the content information if the operational procedure is in advance described in the content information,

wherein said instruction device generates the instruction information according to the operational procedure.

5. The receiving apparatus according to claim 4,

wherein if the content information consists of a plurality of pages, said extraction device extracts information about an operational procedure that is generated by analyzing a link between the plurality of selection items and that covers the plurality of

09767716.01401
F042T0"9T29260

pages, and said instruction device generates instruction information for sequentially outputting the plurality of pages.

- 5 6. A broadcasting apparatus, comprising:
- a generation device analyzing content information of data broadcasting in digital broadcasting and generating an operational procedure for automatically selecting a plurality of selection
 - 10 items included in the content information;
 - a description device describing information about the operational procedure in the content information in such a way to output the content information according to the operation procedure; and
 - 15 an output device outputting content information in which information about the operational procedure is described.
- 20 7. A computer-readable storage medium on which is recorded a program for enabling a computer to execute a process, said process comprising:
- analyzing content information of data broadcasting in digital broadcasting and extracting a plurality of selection items from the content
 - 25 information; and

09767716-01404
FOUO-9729260

generating an operational procedure for
 automatically selecting the plurality of selection
 items in such a way to output the content information
 while automatically selecting the plurality of
 5 selection items.

8. A confirmation method, comprising:

broadcasting content information of data
 broadcasting in digital broadcasting;

10 generating instruction information for
 automatically selecting a plurality of selection items
 included in the content information from the content
 information;

outputting the content information while
 15 automatically selecting the plurality of selection
 items according to the instruction information; and
 confirming the outputted content information.

9. A receiving apparatus, comprising:

20 receiving means for receiving content
 information of data broadcasting in digital
 broadcasting;

instruction means for generating instruction
 information to be used to automatically select a
 25 plurality of selection items included in the content

09757716-012401

information from the content information; and

output means for outputting the content information while automatically selecting the plurality of selection items according to the instruction information.

10. A broadcasting apparatus, comprising:

generation means for analyzing content information of data broadcasting in digital broadcasting and generating an operational procedure for automatically selecting a plurality of selection items included in the content information;

description means for describing information about the operational procedure in the content information in such a way to output the content information in the operation procedure; and

output means for outputting content information in which information about the operational procedure is described.

20

11. A propagating signal for propagating to a computer a program which enables the computer to execute a process, said process comprising:

analyzing content information of data broadcasting in digital broadcasting and extracting

09767197260

a plurality of selection items from the content information; and

generating an operational procedure for automatically selecting the plurality of selection
5 items so that the content information can be outputted while automatically selecting the plurality of selection items.
